

## Stop Windows 11 Upgrade

1. Open GPEdit.msc
2. Computer Configuration
3. Administrative Template
4. Windows Components
5. Windows Update
6. Windows Update for Business
7. Select the Target Feature Update Version
8. Click on Enabled and fill the following fields as below

The screenshot shows the 'Select the target Feature Update version' dialog box. It has a title bar with the same text and standard window controls. At the top right are 'Previous Setting' and 'Next Setting' buttons. Below the title bar are three radio buttons: 'Not Configured', 'Enabled' (which is selected), and 'Disabled'. To the right of these is a 'Comment:' text box. Below the radio buttons is a 'Supported on:' dropdown menu showing 'At least Windows Server 2016 or Windows 10'. Underneath are two sections: 'Options' and 'Help'. The 'Options' section contains two text boxes: 'Which Windows product version would you like to receive feature updates for? e.g., Windows 10' (containing 'Windows 10') and 'Target Version for Feature Updates' (containing '22H2'). The 'Help' section contains a URL 'aka.ms/WindowsTargetVersionInfo', a warning that the device will request the product and version in subsequent scans, and a disclaimer about accepting Microsoft Software License Terms. At the bottom are 'OK', 'Cancel', and 'Apply' buttons.
